Operation Decimal

- Object: Have the largest sum
- Materials: cards 1-9, die, paper, pencil

Directions:
Each player takes two cards and makes a two-digit number (red cards are whole numbers, black cards are decimals). A die is rolled and players each multiply their numbers by the number on the die. Players record their products and after 10 rounds each player finds the sum of their products. The greatest sum wins.

Variation: Players take three cards and multiply this number by the die roll, or take four numbers and multiply two, two-digit numbers.
